

ABSTRACT OF THE DISCLOSURE

A plurality of fuse elements each having a pair of flat terminal pieces interconnected by a fusible part, and a coupling part for coupling the flat terminal pieces of each fuse element along the fuse belt are one-piece formed by pressing process. A fuse belt is formed by attaching an insulating housing covering the fusible part to each fuse element. The flat terminal pieces of each fuse element in the fuse belt are successively separated from the coupling part by cutting, and the fuses are mounted to fuse mounting parts of an electric junction box.
